

In 2003, Riverside Public Utilities was among just 13 publicly owned utilities to fully comply with the state's Power Source Disclosure Program.

The California Legislature adopted SB 1305 in 1997, which requires that all 58 retail power providers in California comply with the state's Power Source Disclosure Program.

- The activities carried out to meet this mandate are called the "Power Source Disclosure Program."
- The California Energy Commission's "Reconciliation of Retailer Claims, 2003" is the most recent annual report issued about the program and the source of this data.
- Retail Providers are required to submit the following information to their customers: Quarterly power content labels, an annual power content label, specific claims, and an annual report.

Retail Electric Providers

Type of provider	Number of providers	Providers In Full Compliance	
Electric Cooperatives	4	0	
Electric Service Providers	7	1	(3 Phases Energy Services)
Investor Owned Utilities	7	0	
Power Pools	5	0	
Publicly Owned Utilities	35	12	(RIVERSIDE PUBLIC UTILITIES, Alameda, Azusa, Anaheim, Healdsburg, Lodi, Palo Alto, Redding, Roseville, Sacramento, Turlock, Ukiah)

Established in 1895, Riverside Public Utilities is a consumer-owned water and electric utility that is governed by a Board of seven community volunteers. Riverside Public Utilities serves over 100,000 electric and 60,000 water customers within the City of Riverside.

As a municipal utility, Riverside Public Utilities believes in fully informing our customer-owners.

To be well-informed consumers, our customers need to know about the different power sources we use and how much of their power comes from each source.

We also want all our customers to know that Riverside is using a higher percentage of renewable energy than the state average."

David H. Wright
Interim Public Utilities
Director
